## SCHEDULE 1

SUBMISSION OF TARIFFS FOR TDM TRANSPORT SERVICES BY TELECOM NAMIBIA  
LIMITED COMMUNICATIONS ACT, 2009

## 1. Clarification on the Pricing Structure and Product Descriptions

## 1.1 Pricing Structure

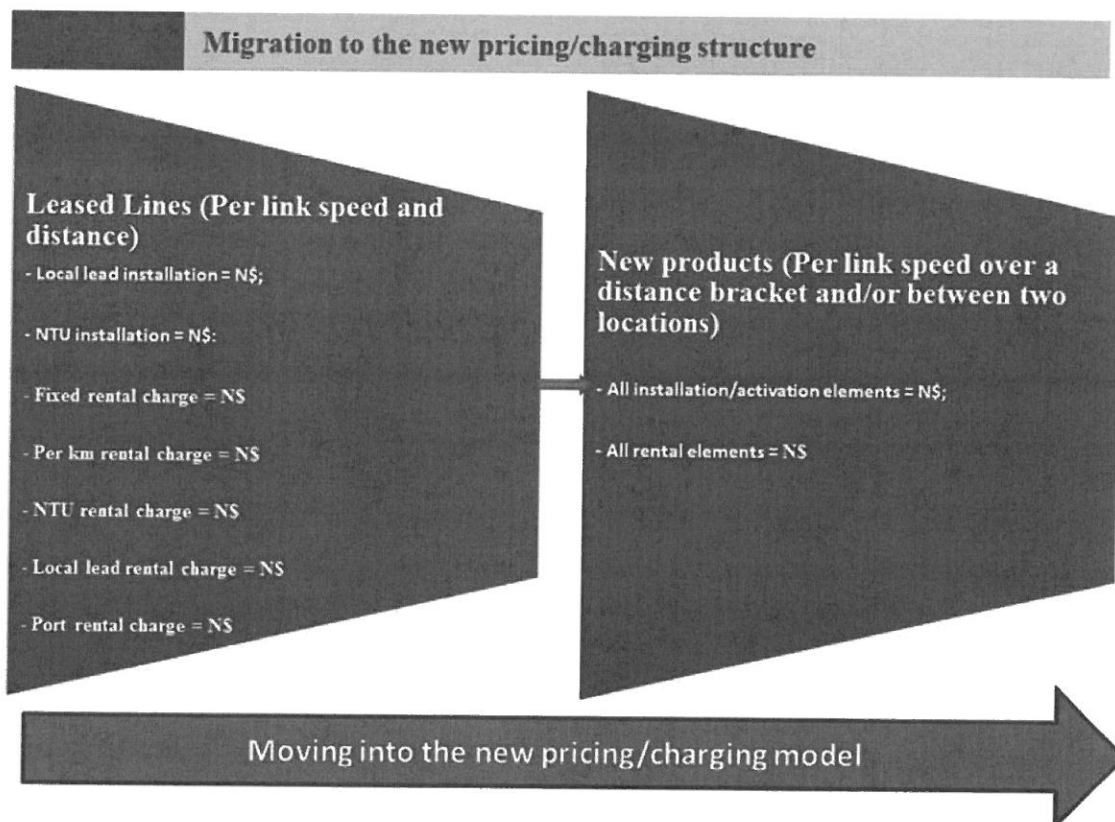

Telecom Namibia has defined new TDM transport services with clear differentiation of how the different services are produced through our different network layers.

The new pricing model has also taken into account all the various network elements and activities involved in producing the different services in order to determine the final price points.

With the *old Leased line services*, tariffs were determined for each element of a given service and added together to form a customer offer based on a given customer requirement or solution. Distance charges were calculated over the distance units presenting different price points for every incremental distance unit.

With the *new pricing structure*, a single tariff is determined for a total network solution with all relevant elements included in the price point. Individual distance charges are not applicable but the pricing model defines a tariff applicable over a certain distance bracket per link speed.

See table below for illustration:

The pricing model considered the network element chain involved in producing the services and products have been defined in a standard way to ensure consistency and transparency to customers and other stakeholders.

## 1.2 Product Descriptions/Definitions

Below are full descriptions of the different services that informed the new pricing model.

### a. Local and National Data Links

#### *Product Description*

Telecom Namibia **Local** and **National Data Link TDM** products are designed for Government, Corporates, Large and SME's to connect customer locations with each other. This service provides a Point to Point connection between two customer locations. The service is terminated at both sites with a local loop and a NTU which acts as service end points.

### b. National Express Routes

#### *Product Description*

Telecom Namibia **National Express Routes (POP – POP)**; is designed for carriers, operators and large Enterprises to connect the major towns in Namibia in an optimised way. They can be offered with and without protection. The setup is optimised regarding number of hops and technologies to address the demand for high capacity data transport through the country. TN POP to TN POP connectivity only.

### c. Online Service TDM Connect

#### *Product Description*

Telecom Namibia **Online Service TDM Connect** products are designed for Operators who connect locations of their customers to an aggregation point. At the Aggregation Point, the Operator has to install its own Operator Hub. The traffic will be handed over with a STM1 Interconnect between the Operator Equipment and the Telecom Namibia Network Node at the nearest Operator Hub.

### d. TDM Backhauling

#### *Product Description*

Telecom Namibia **TDM Backhauling** products are designed for Operators who connect Base Stations with TDM Services back to the next Operator Hub. At the Aggregation Point, the Operator has to install its own Operator Hub. The traffic will be handed over with a STM1 Interconnect between the Operator Equipment and the Telecom Namibia Network Node at the nearest Operator Hub.
